TECHNOLOGY, KANTEPUDI, GUNTUR.**

source code :

index.js file :

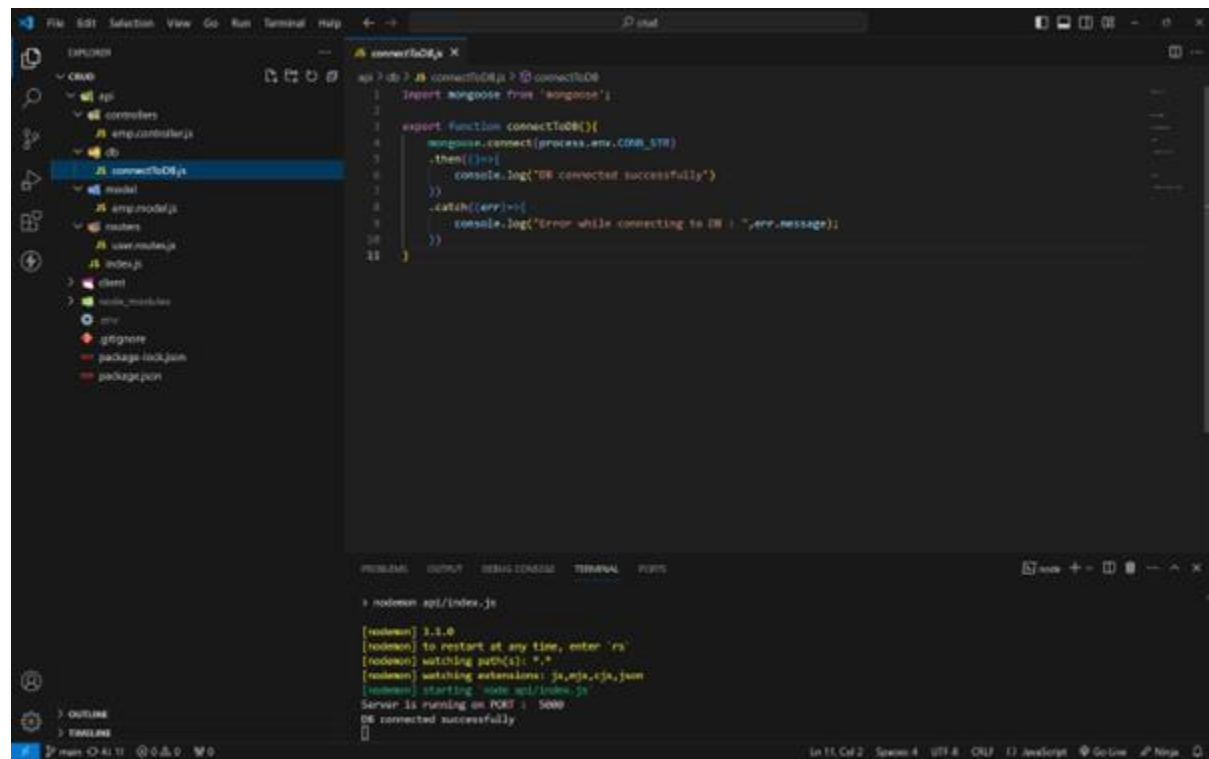

The screenshot shows the VS Code editor with the `index.js` file open. The file contains the following code:

```
1 import path from 'path';
2 import express from 'express';
3 import { config } from 'dotenv';
4 import { connectToDB } from './db/connectToDB.js';
5 config();
6 import userRoute from './routes/user.routes.js';
7
8
9
10 const __dirname = path.resolve();
11 const app = express();
12 app.use(express.json());
13 app.use("/api/user", userRoute);
14
15 app.use(express.static(path.join(__dirname, "/client/dist")));
16
17 app.get("/", (req, res) => {
18   res.sendFile(path.join(__dirname, "client", "dist", "index.html"));
19 });
20
21 const PORT = process.env.PORT || 5000
22 app.listen(PORT, () => {
23   connectToDB();
24   console.log("Server is running on PORT : ", PORT)
25 })
```

The terminal output shows the command `node api/index.js` being executed, and the server starting on port 5000. The output is as follows:

```
> node api/index.js
[nodemon] 3.1.0
[nodemon] to restart at any time, enter 'rs'
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting 'node api/index.js'
Server is running on PORT : 5000
DB connected successfully
```

MONGODB CONNECTION :

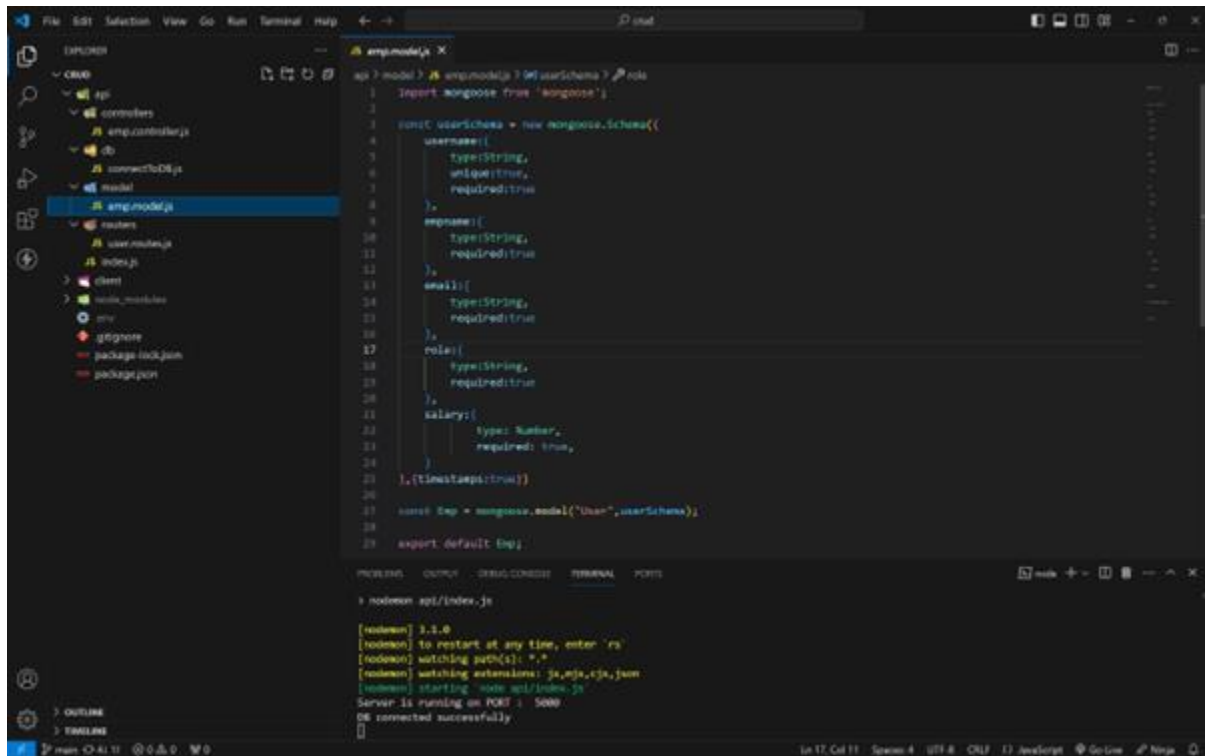

The screenshot shows the VS Code editor with the `connectToDB.js` file open. The file contains the following code:

```
1 import mongoose from 'mongoose';
2
3 export function connectToDB(){
4   mongoose.connect(process.env.DB_STR)
5     .then(() => {
6       console.log("DB connected successfully")
7     })
8     .catch((err) => {
9       console.log("Error while connecting to DB : ", err.message);
10     })
11 }
```

The terminal output shows the command `node api/index.js` being executed, and the server starting on port 5000. The output is as follows:

```
> node api/index.js
[nodemon] 3.1.0
[nodemon] to restart at any time, enter 'rs'
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting 'node api/index.js'
Server is running on PORT : 5000
DB connected successfully
```

MODEL :

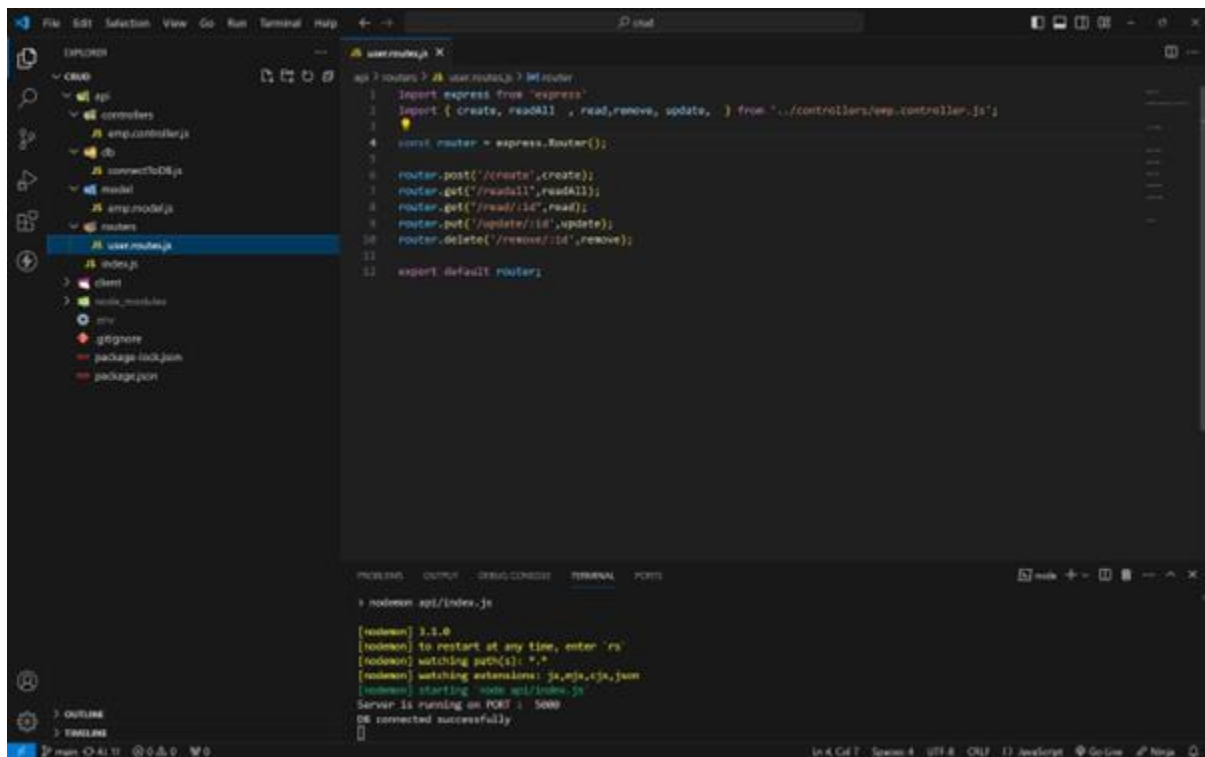

The screenshot shows the VS Code editor with the file explorer on the left. The file explorer shows a project structure with folders like 'api', 'controllers', 'db', 'model', 'routes', 'user.routes.js', 'index.js', 'client', 'node_modules', 'src', 'gitignore', 'package-lock.json', and 'package.json'. The 'model' folder is selected, and the file 'model.js' is open in the editor. The code in 'model.js' defines a Mongoose schema for a user and a corresponding model. The terminal at the bottom shows the command 'nodemon api/index.js' and the output of the application starting on port 5000.

```
api > model > # emp.model.js > # role
1 import mongoose from 'mongoose'
2
3 const userSchema = new mongoose.Schema({
4   username: {
5     type: String,
6     unique: true,
7     required: true
8   },
9   email: {
10    type: String,
11    required: true
12  },
13   role: {
14    type: String,
15    required: true
16  },
17   salary: {
18    type: Number,
19    required: true
20  }
21 }, { timestamps: true })
22
23 const Emp = mongoose.model('User', userSchema);
24
25 export default Emp;
```

```
> nodemon api/index.js
[nodemon] 1.1.0
[nodemon] to restart at any time, enter 'rs'
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting 'node api/index.js'
Server is running on PORT : 5000
DE connected successfully
```

ROUTES:

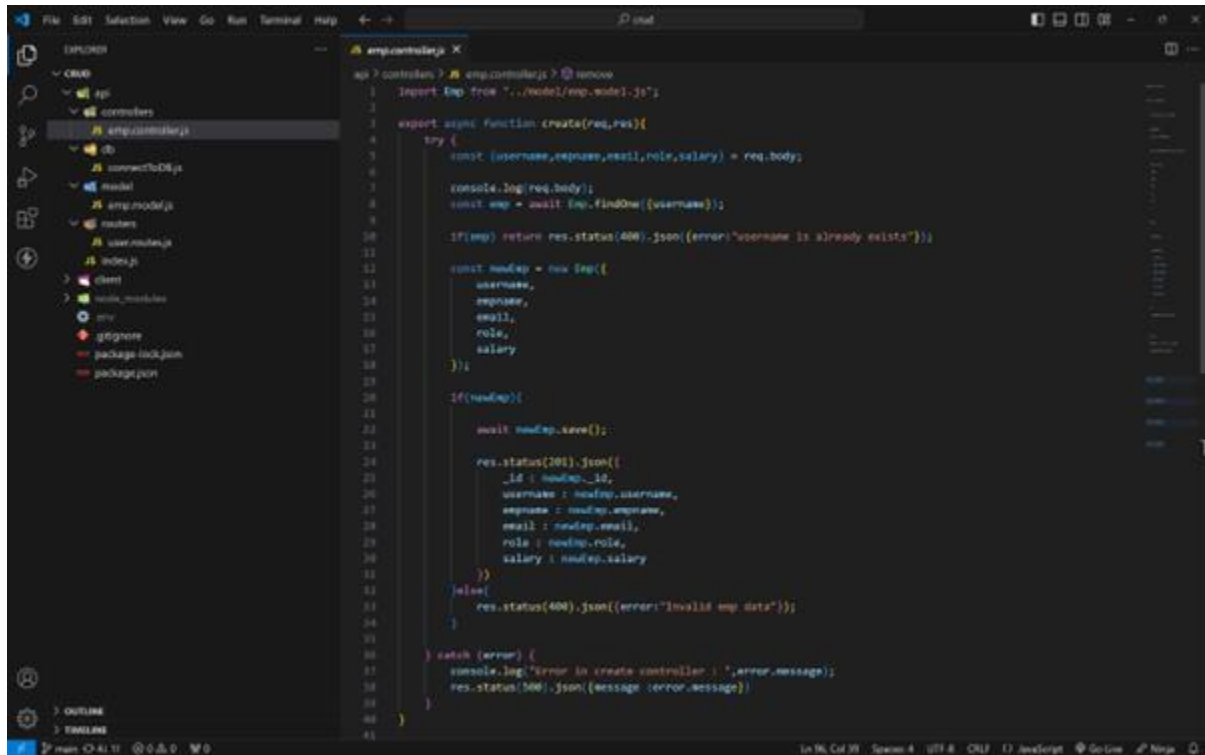

The screenshot shows the VS Code editor with the file explorer on the left. The file explorer shows a project structure with folders like 'api', 'controllers', 'db', 'model', 'routes', 'user.routes.js', 'index.js', 'client', 'node_modules', 'src', 'gitignore', 'package-lock.json', and 'package.json'. The 'routes' folder is selected, and the file 'user.routes.js' is open in the editor. The code in 'user.routes.js' defines the routes for the user model. The terminal at the bottom shows the command 'nodemon api/index.js' and the output of the application starting on port 5000.

```
api > routes > # user.routes.js > # router
1 import express from 'express'
2 import { create, readAll, read, remove, update, } from '../controllers/emp.controller.js';
3
4 const router = express.Router();
5
6 router.post('/create', create);
7 router.get('/readAll', readAll);
8 router.get('/read/:id', read);
9 router.put('/update/:id', update);
10 router.delete('/remove/:id', remove);
11
12 export default router;
```

```
> nodemon api/index.js
[nodemon] 1.1.0
[nodemon] to restart at any time, enter 'rs'
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting 'node api/index.js'
Server is running on PORT : 5000
DE connected successfully
```

CONTROLLERS :

CREATE :

```
1 import Emp from '../model/emp.model.js';
2
3 export async function create(req,res){
4   try {
5     const {username,password,email,role,salary} = req.body;
6
7     console.log(req.body);
8     const emp = await Emp.findOne({username});
9
10    if(emp) return res.status(400).json({error:"username is already exists"});
11
12    const newEmp = new Emp({
13      username,
14      password,
15      email,
16      role,
17      salary
18    });
19
20    if(newEmp){
21      await newEmp.save();
22
23      res.status(201).json({
24        _id : newEmp._id,
25        username : newEmp.username,
26        password : newEmp.password,
27        email : newEmp.email,
28        role : newEmp.role,
29        salary : newEmp.salary
30      });
31    }
32    else{
33      res.status(400).json({error:"Invalid emp data"});
34    }
35  } catch (error) {
36    console.log("Error in create controller : ",error.message);
37    res.status(500).json({message : error.message});
38  }
39 }
```

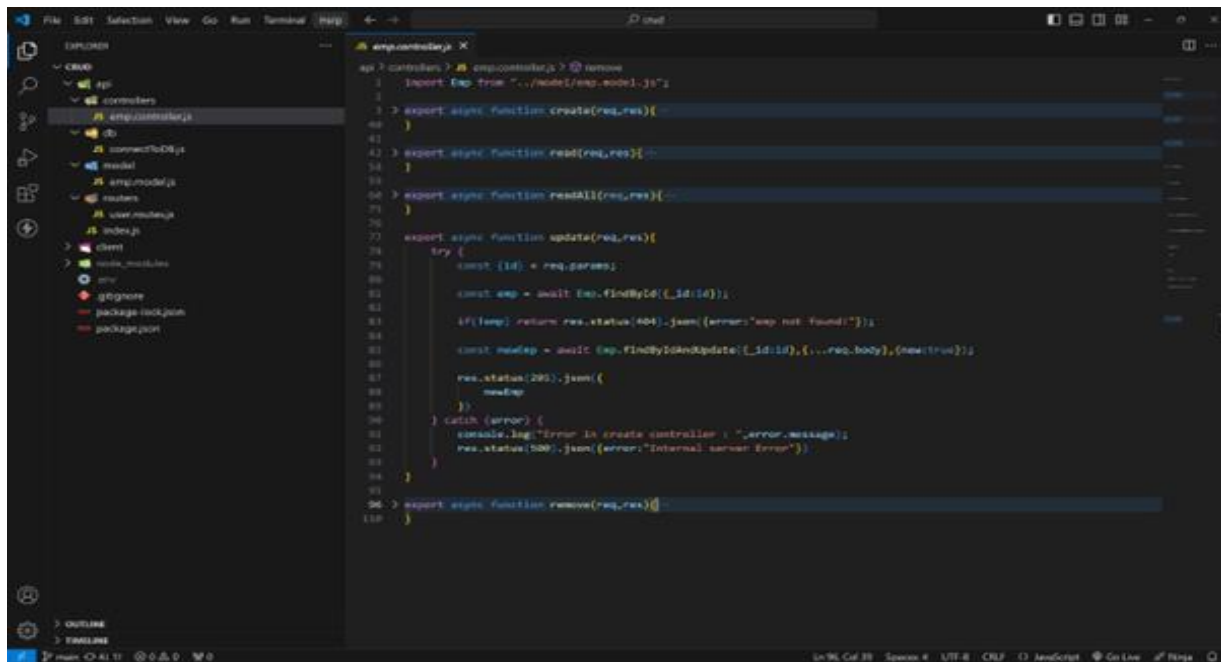

READ ALL:

7    }
8
9  > export async function readAll(req,res){
10   }
11
12 > export async function update(req,res){
13   try {
14     const {id} = req.params;
15     const emp = await Emp.findById(_id:id);
16     if(!emp) return res.status(404).json({error:"emp not found"});
17     const newEmp = await (Emp.findByIdAndUpdate(_id:id), {...req.body}, {new:true});
18     res.status(200).json({
19       newEmp
20     });
21   } catch (error) {
22     console.log("Error in create controller : ",error.message);
23     res.status(500).json({error:"Internal server Error"});
24   }
25 }
26 > export async function remove(req,res){
27   }
28 }
```

DELETE :

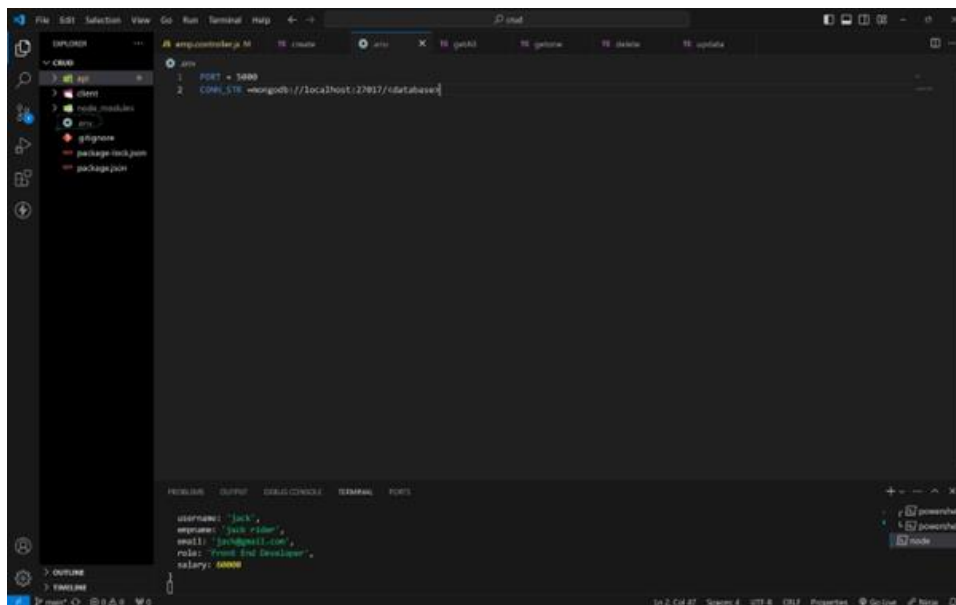

```
ap > controllers > emp.controller.js > @ remove
1  Import Emp from "...model/emp-model.js";
2
3  > export async function create(req,res){
4    }
5
6  > export async function read(req,res){
7    }
8
9  > export async function readAll(req,res){
10   }
11
12 > export async function update(req,res){
13   try {
14     const {id} = req.params;
15     const emp = await Emp.findById(_id:id);
16     if(!emp) return res.status(404).json({error:"emp not found"});
17     const newEmp = await (Emp.findByIdAndUpdate(_id:id), {...req.body}, {new:true});
18     res.status(200).json({
19       newEmp
20     });
21   } catch (error) {
22     console.log("Error in create controller : ",error.message);
23     res.status(500).json({error:"Internal server Error"});
24   }
25 }
26 > export async function remove(req,res){
27   try {
28     const {id} = req.params;
29     await Emp.findByIdAndDelete(_id:id);
30     res.status(200).json({
31       id,
32       message : "deleted successfully..",
33     });
34   } catch (error) {
35     console.log("Error in create controller : ",error.message);
36     res.status(500).json({error:"Internal server Error"});
37   }
38 }
39 }
```

HOW TO RUN ON LOCALLY :

- 1 . Create a folder as any name.
- 2 . Open that folder in any code editor (vs code).
- 3 . Open terminal (ctrl + ~) on code editor.
- 4 . Type this code to get code locally.
- 5 . Now move to crud folder (cd crud in terminal)
- 6 . Ignore client folder.
- 7 . Here crud is root folder.
- 8 . In root folder create a .env file and create a PORT and
- 9 CONN_STR variables and assign value.

ex : PORT = 3000 (commonly any number between 3000 - 8080).
CONN_STR = your mongodb_connection_string.

--- trouble in above process ? : simply

paste this code in .env file .

10. After in terminal (in crud folder as root folder) type this command to run server.

npm i (installing all dependencies) npm

run dev (to run server)

11. if you get below message in terminal then your server will running successfully.

```
PS C:\Users\4727y\OneDrive\Desktop\internshala\crud> npm run dev

> crud@1.0.0 dev
> nodemon api/index.js

[nodemon] 3.1.0
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting `node api/index.js`
Server is running on PORT : 5000
DB connected successfully
```

route and its functionality :

For this use any API using tools like Postman or Thunder Client.

i use THUNDER CLIENT.

CREATE ROUTE :

1 . This route is used to create a new employee in database with a below fields.

username, empname, email, role, salary

2 . in thunder client click on new request and select this options
method as post url as <http://localhost:5000/api/user/create> pass

this json data as a body as your required value.

```
{
  "username": "jack",
  "empname": "jack rider",
  "email": "jack@gmail.com",
  "role": "Front End Developer",
  "salary": 60000
}
```

}

3 . finally press send to insert data in mongodb data base and get a inserted data as a

response.

4 . If user is already in db it will return User is already exist as response.

for more details visit below output images...

READ ONE :

1 . This route is used to read specific user info by passing that user id as a param. method

as get

url as <http://localhost:5000/api/user/read/65ed7b3d76e1dcc9a51654ca>

2 . After sending you will get that specific user details as response.

READ ALL :

1 . Read all route is used to get all the user data existing in the mongodb data base .

method as get url as

<http://localhost:5000/api/user/readall>

2 . After sending you will get that all user details as response.

UPDATE :

1 . This route is used to update specific user by passing that user id as

a param. method

as put

url as <http://localhost:5000/api/user/update/65ed7b3d76e1dcc9a51654ca>

2 . After sending you will get updated user details as response.

DELETE :

**1 . This route is used to delete specific user by passing that user id as
a param. method as**

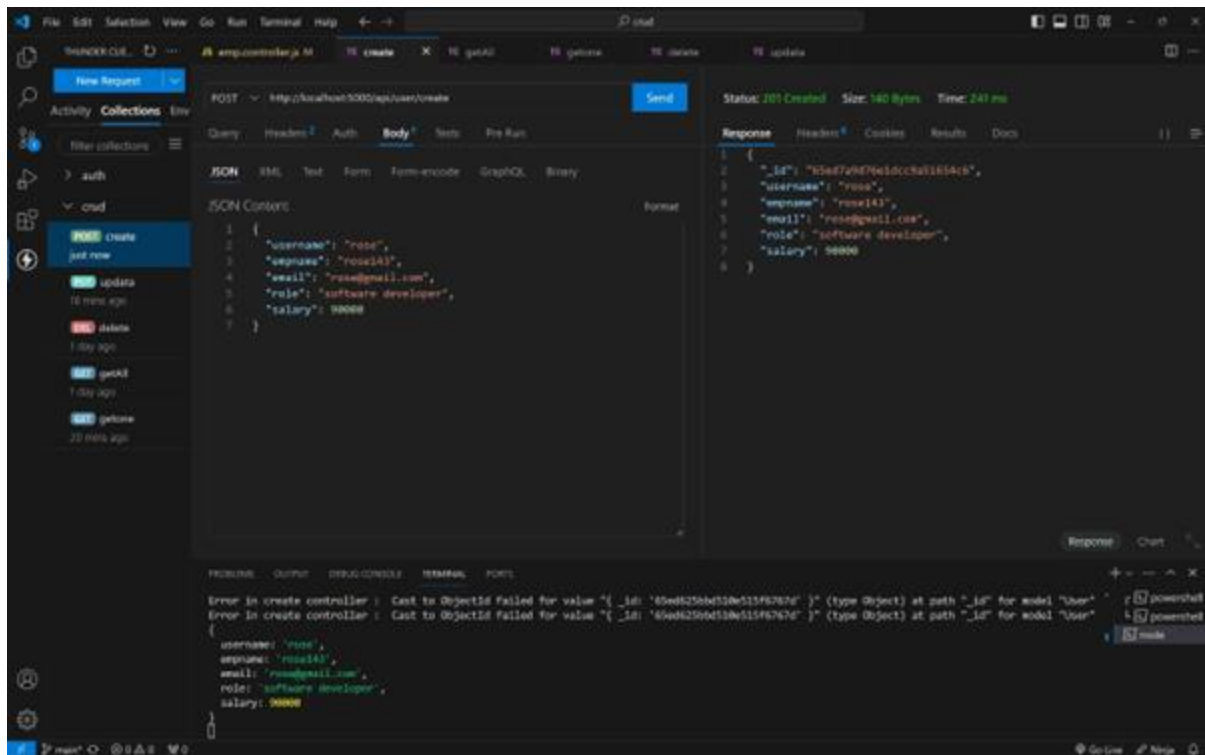

delete

url as <http://localhost:5000/api/user/delete/65ed7b3d76e1dcc9a51654ca>

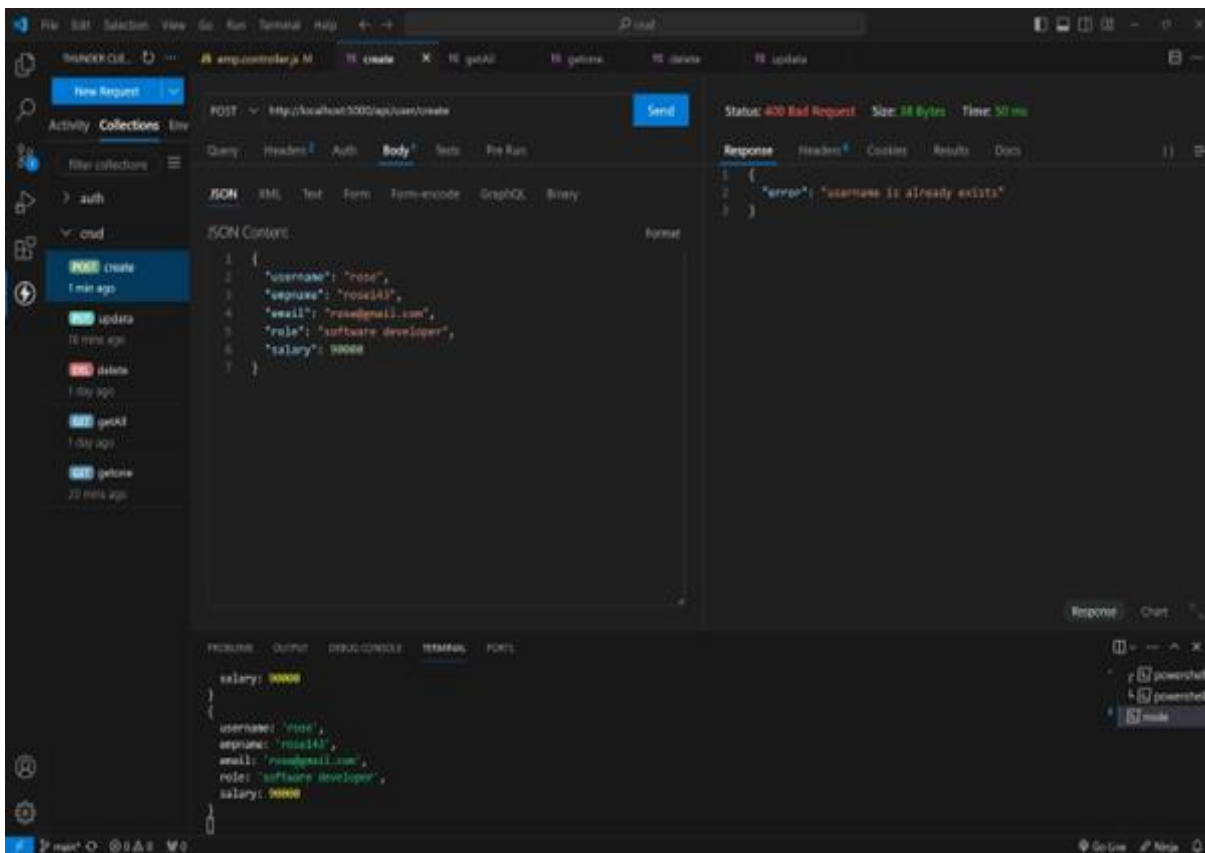

2 . After sending you will deleted successfully as response.

OUTPUT :

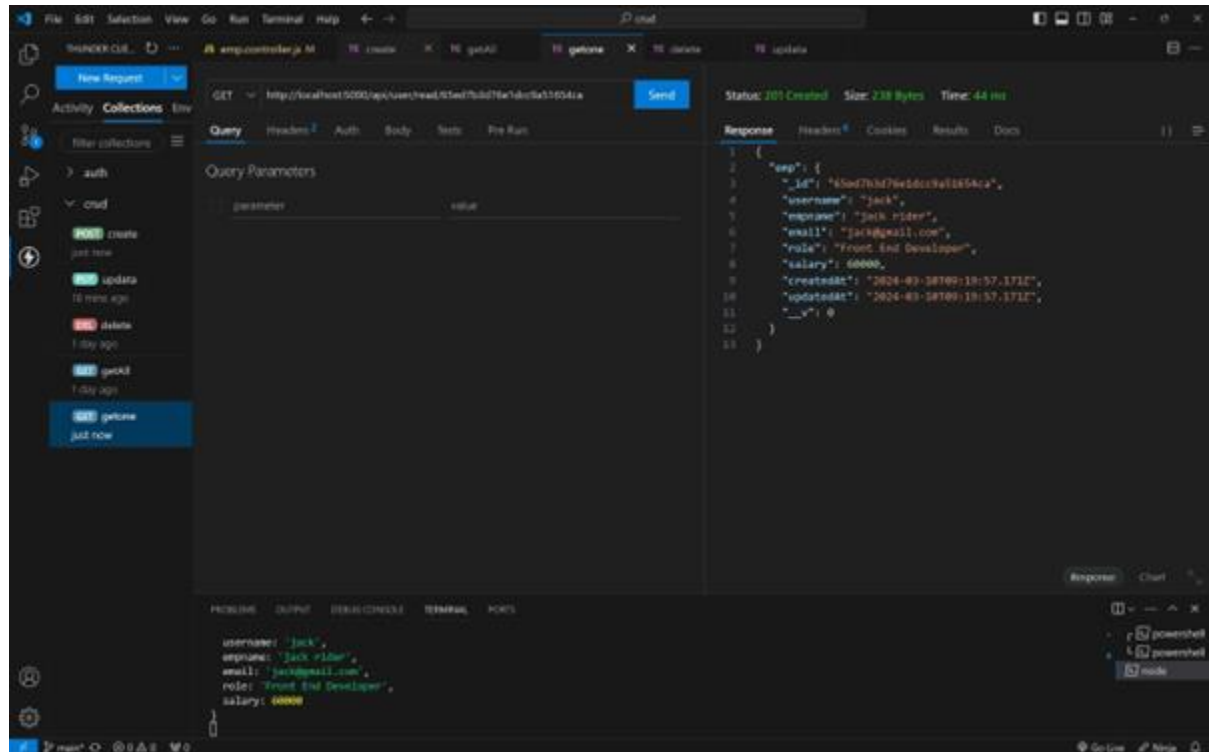

CREATE A NEW USER :

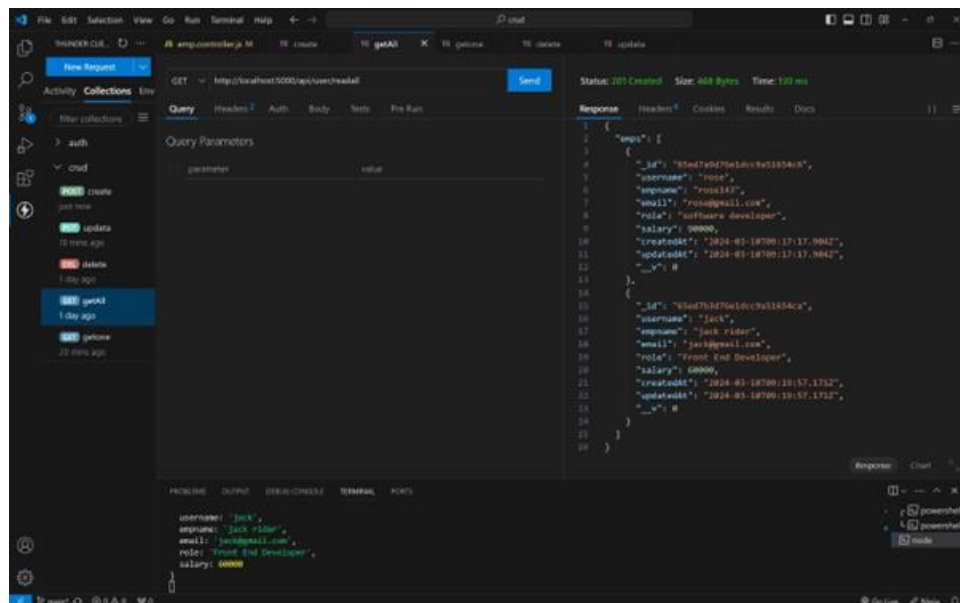

CREATING USER WITH EXISTING USERNAME :
